

# Outcomes with drug-eluting stents in acute coronary syndromes

Pawel Buszman, MD, PhD, FESC  
Silesian Medical University  
Katowice, Poland

# Potential conflicts of interest

Speaker's name: Pawel Buszman, MD. PhD, FESC, FACC

I have the following potential conflicts of interest to report:

- Research contracts
- Consulting
- Employment in industry
- Stockholder of a healthcare company
- Owner of a healthcare company
- Other(s)

I do not have any potential conflict of interest

# BMS vs DES for STEMI

## Massachusetts State Registry

2-year mortality (propensity adjusted) in 1298 matched pairs (2596 pts) with STEMI at 21 hospitals between 4/03–9/04

<u>Drug-Eluting Stent</u>					
No. at risk	1298	1289	1250	1227	1213
Cum. incidence (%)	0.7	3.7	5.5	6.5	8.5
<u>Bare-Metal Stent</u>					
No. at risk	1298	1292	1223	1194	1173
Cum. incidence (%)	0.5	5.8	8.0	9.6	11.6

# Adjusted AMI analysis

1926 STEMI pts in NYS database 10/03-12/04  
 (1154 DES, 772 BMS) 2-year Mortality (adjusted)

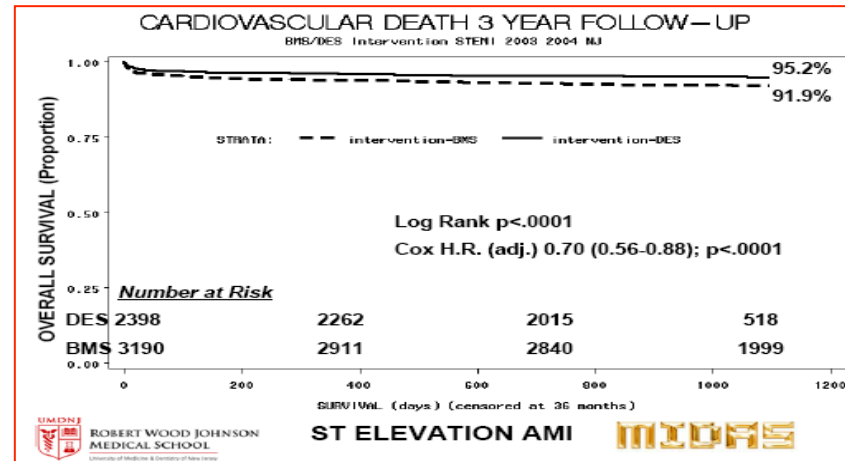

# MIDAS Database: 2 year survival after AMI (BMS=5825, DES=6147)

## CONCLUSIONS

MIDAS DATA RECORDS FROM 2003 and 2004 SHOW THE USE OF DRUG ELUTING STENTS IN THE SETTING OF AMI WAS ASSOCIATED WITH SIGNIFICANT REDUCTIONS OF 3-YEAR ALL CAUSE MORTALITY AND CARDIOVASCULAR MORTALITY WHEN COMPARED WITH THE USE OF BARE METAL STENTS.

# MIDAS Database: 2 year survival after AMI (BMS=5825, DES=6147)

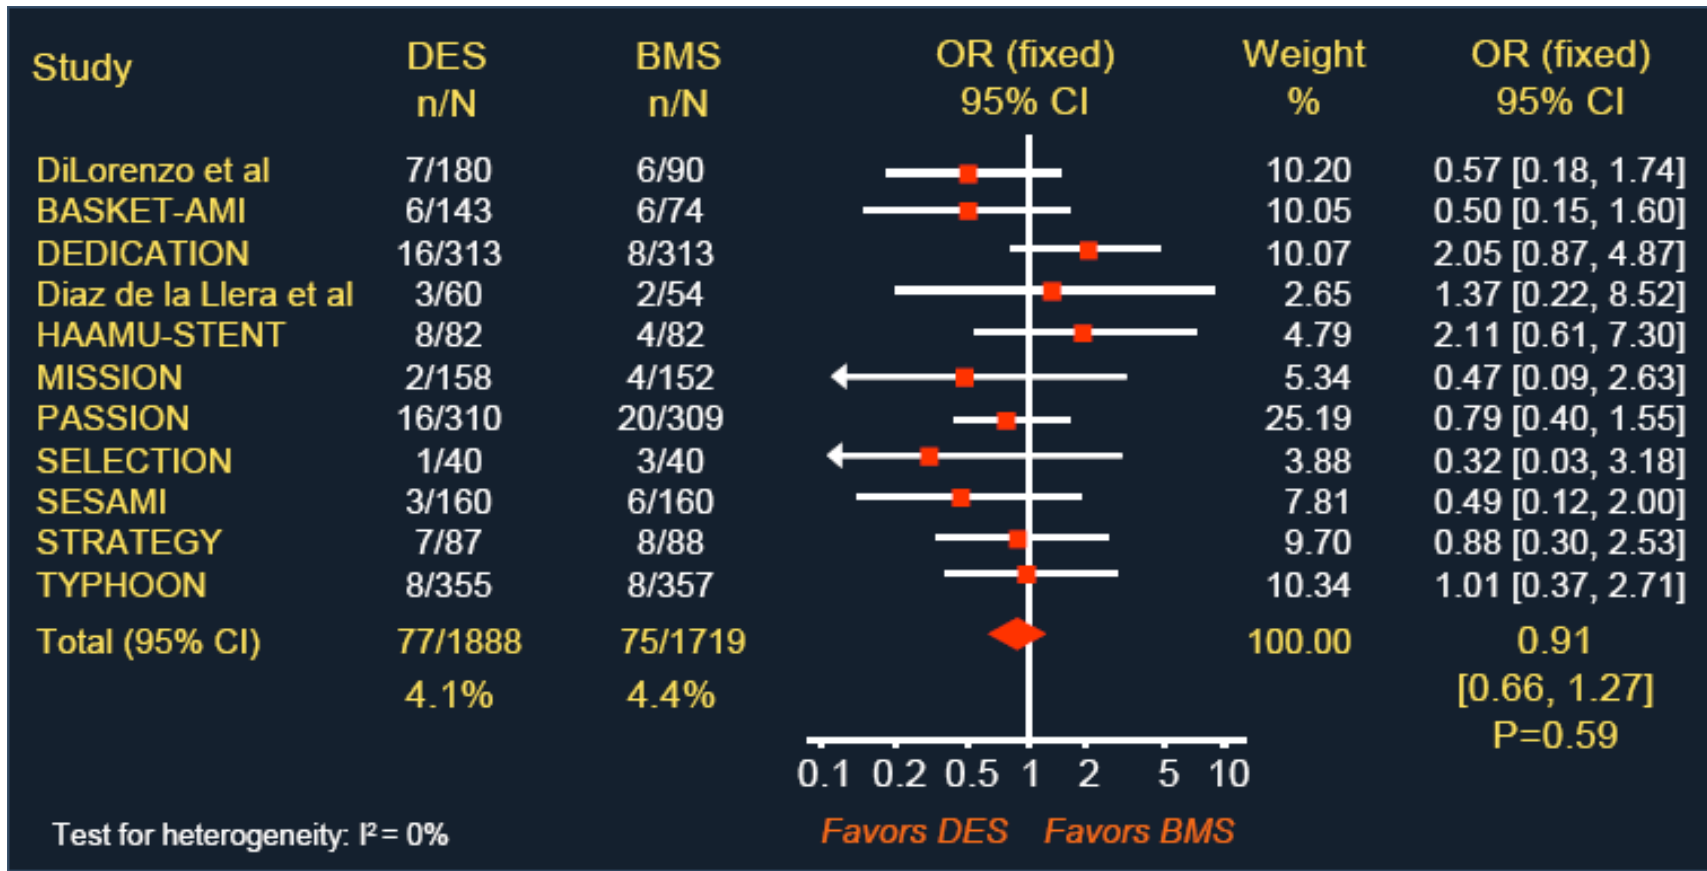

NSTEMI

STEMI

# 11 RCTs in AMI (n=3607) BMS vs DES

## DEATH AT 12 MONTHS

# 11 RCTs in AMI (n=3607) BMS vs DES

## TVR AT 12 MONTHS

# THE TYPHOON TRIAL

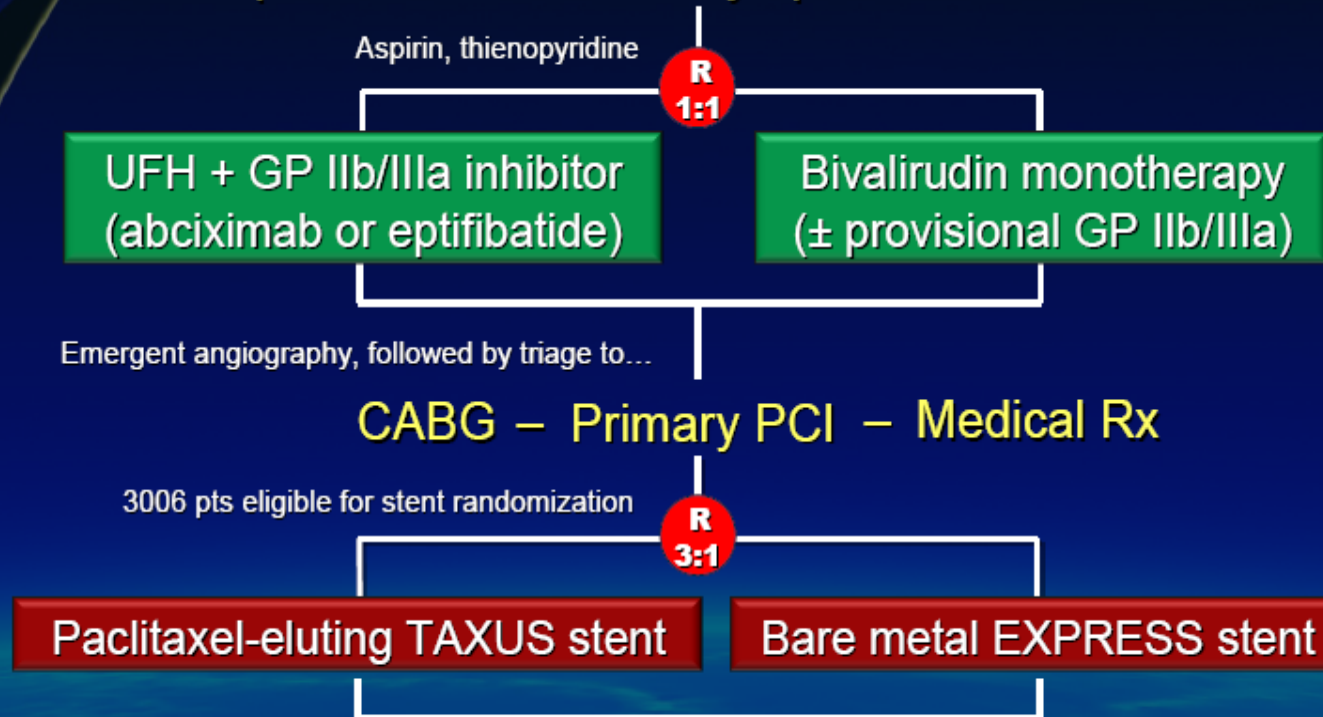

Primary endpoint (TVF) through 360 days

# HORIZONSAMI

Harmonizing Outcomes with Revascularization and Stents in AMI

3602 pts with STEMI with symptom onset  $\leq 12$  hours

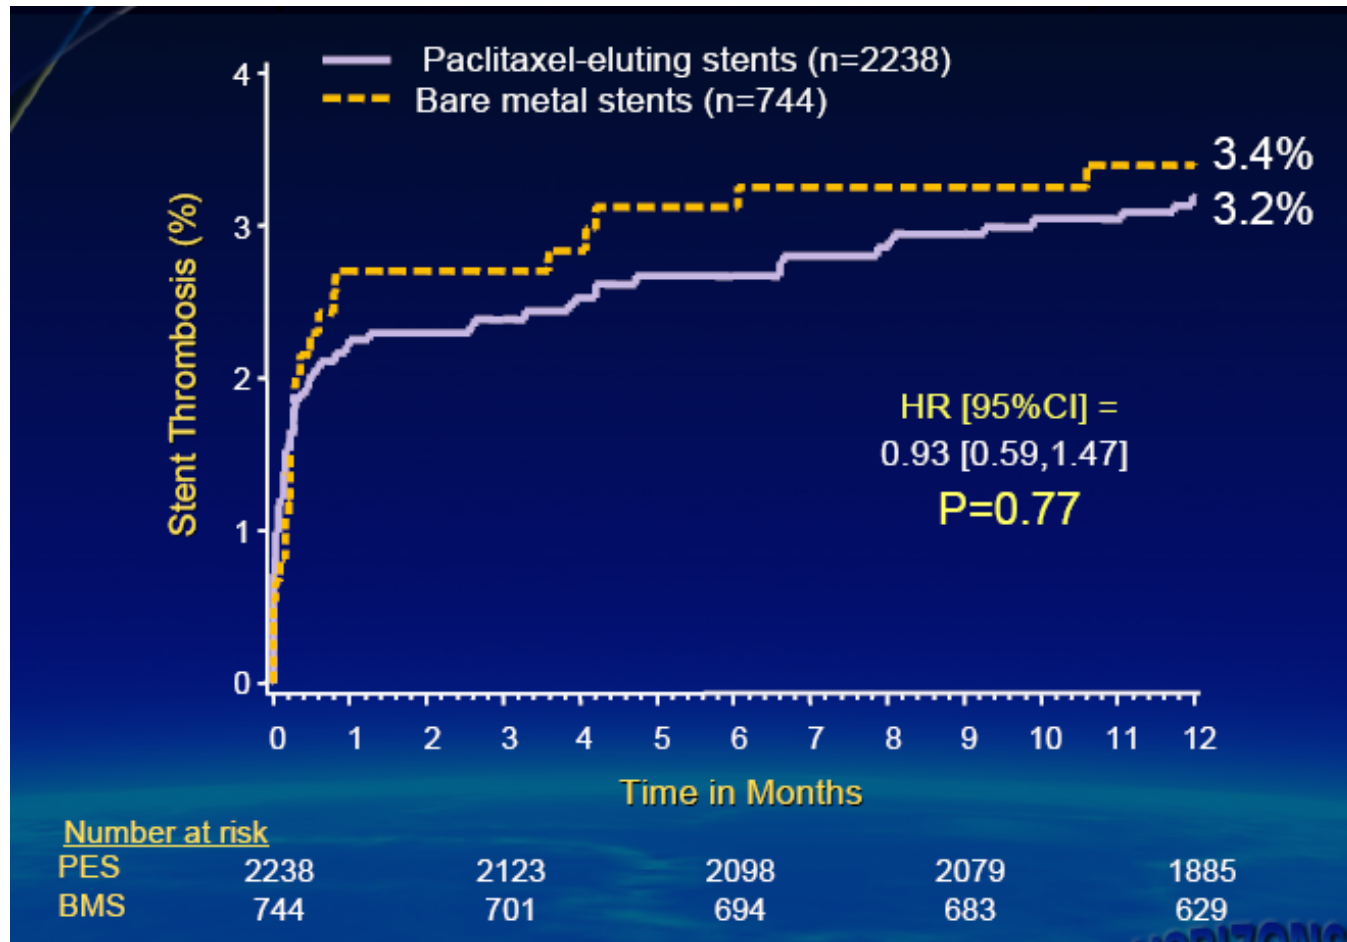

Clinical FU at 30 days, 6 months, 1 year, and then yearly through 5 years; angio FU at 13 months

HORIZONSAMI

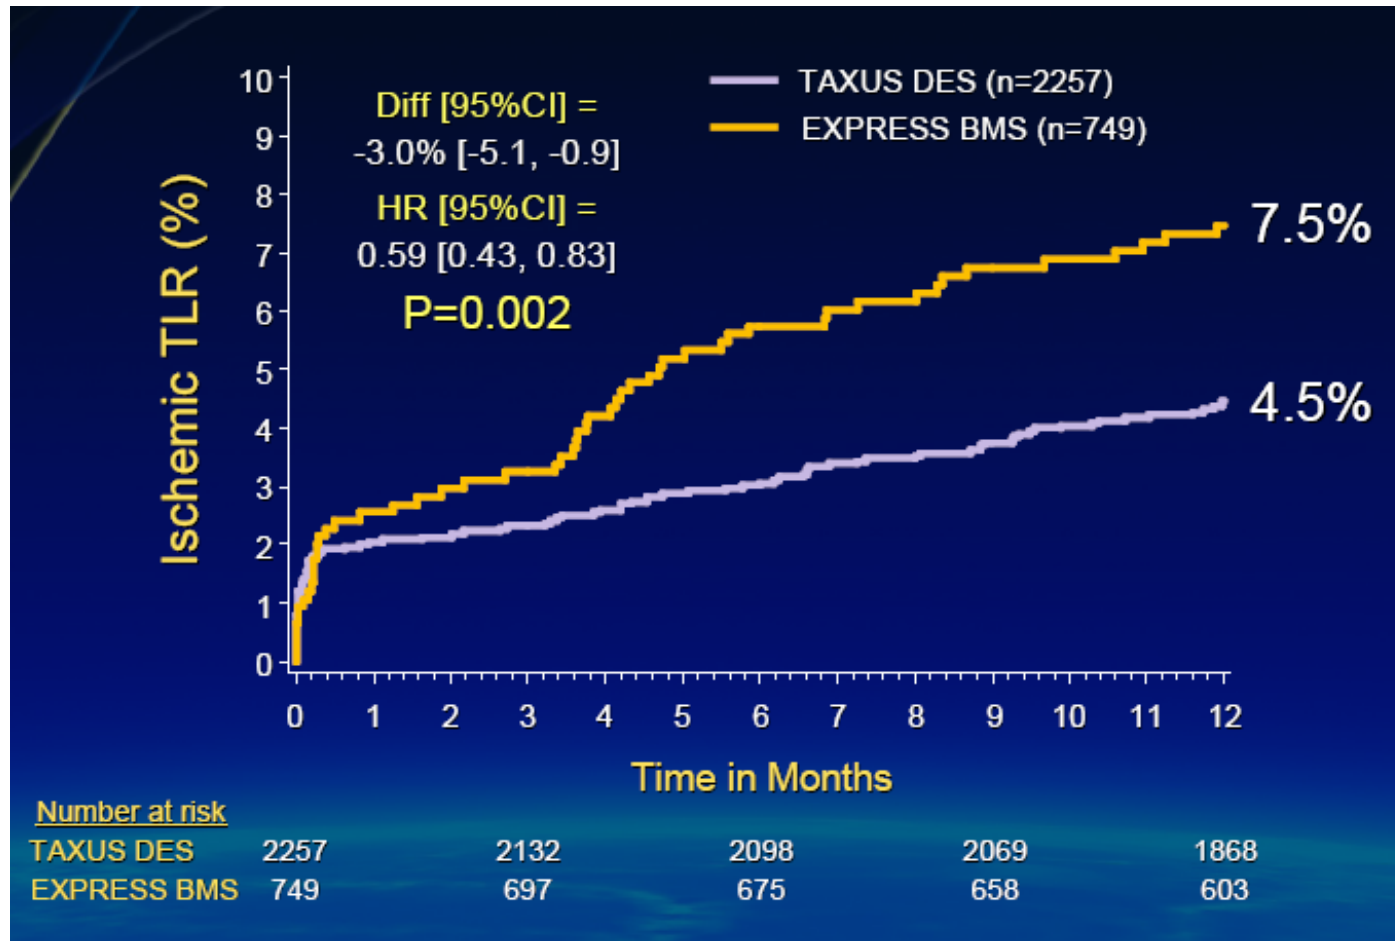

# HORIZONS AMI

## Stent thrombosis

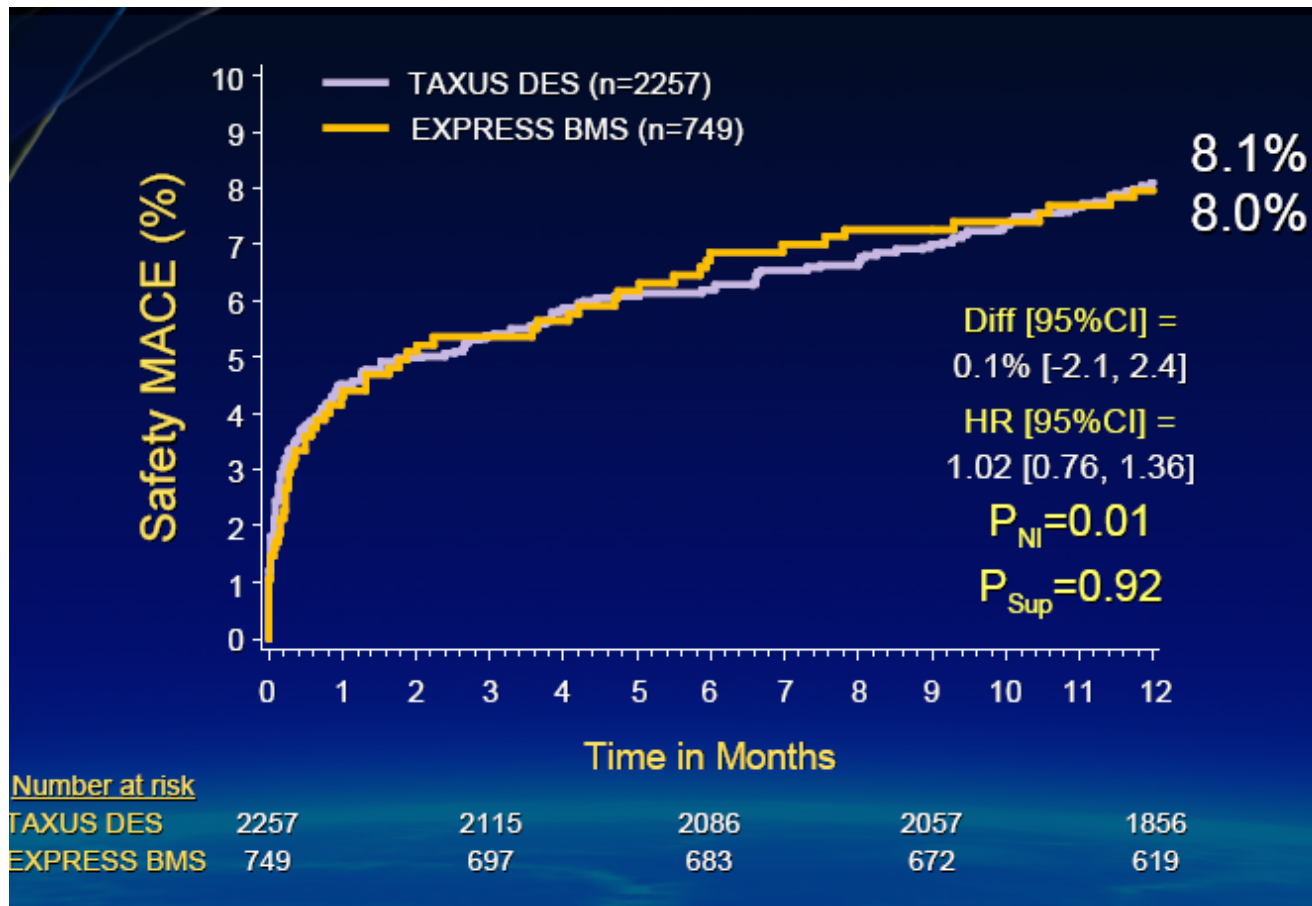

# HORIZONS AMI: Clinically driven TVR

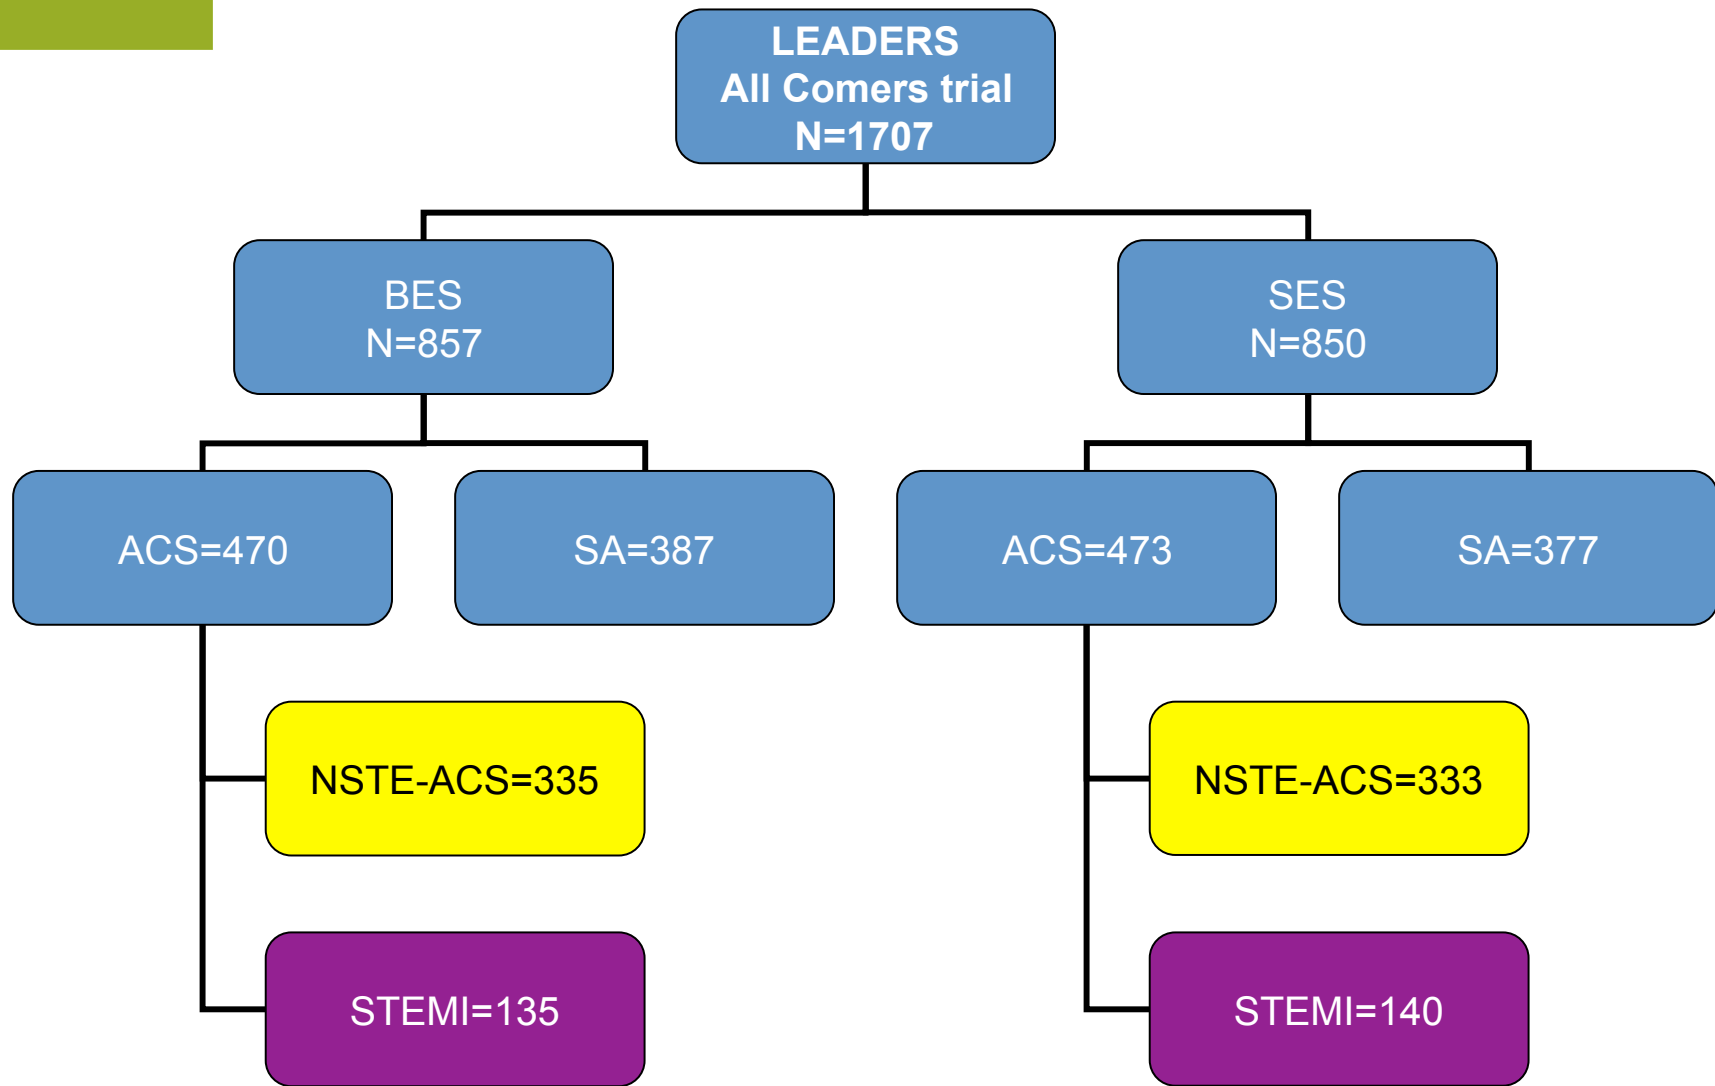

# HORIZONS AMI

## Primary Safety Endpoint: Safety MACE

# Study population

# Study endpoints

- Primary
  - Cardiac death (12 month)
  - Combined: cardiac death, MI, TVR (12 month)
- Secondary:
  - Cardiac death (one month)
  - Combined: cardiac death, MI, TVR (one month)
  - All cause mortality (one and 12 month)
  - Any TVR, TLR, repeat revascularization (one and 12 month)
  - NQMI, QMI (one and 12 month)
  - In stent thrombosis: acute, sub-acute, late

# STEMI vs NSTEMI-ACS

# STEMI vs NSTEMI-ACS

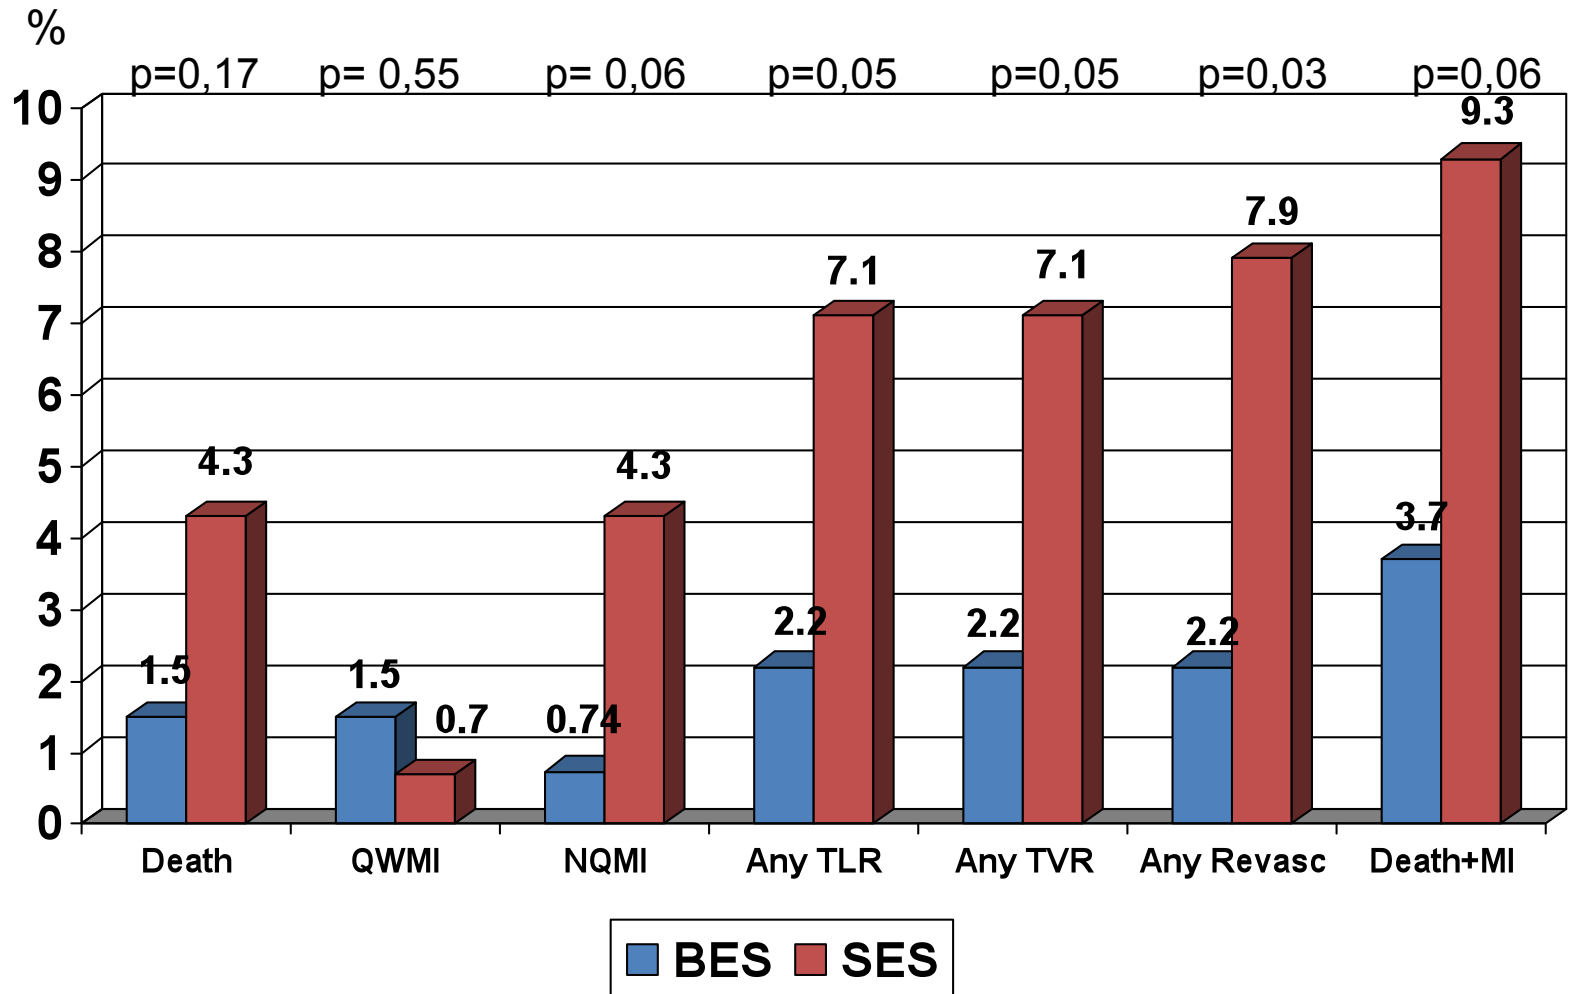

## 12 month follow-up

- There is no significant difference between both groups for NSTEMI-ACS
- Significant differences between the groups in respect to clinical outcomes in STEMI patients.

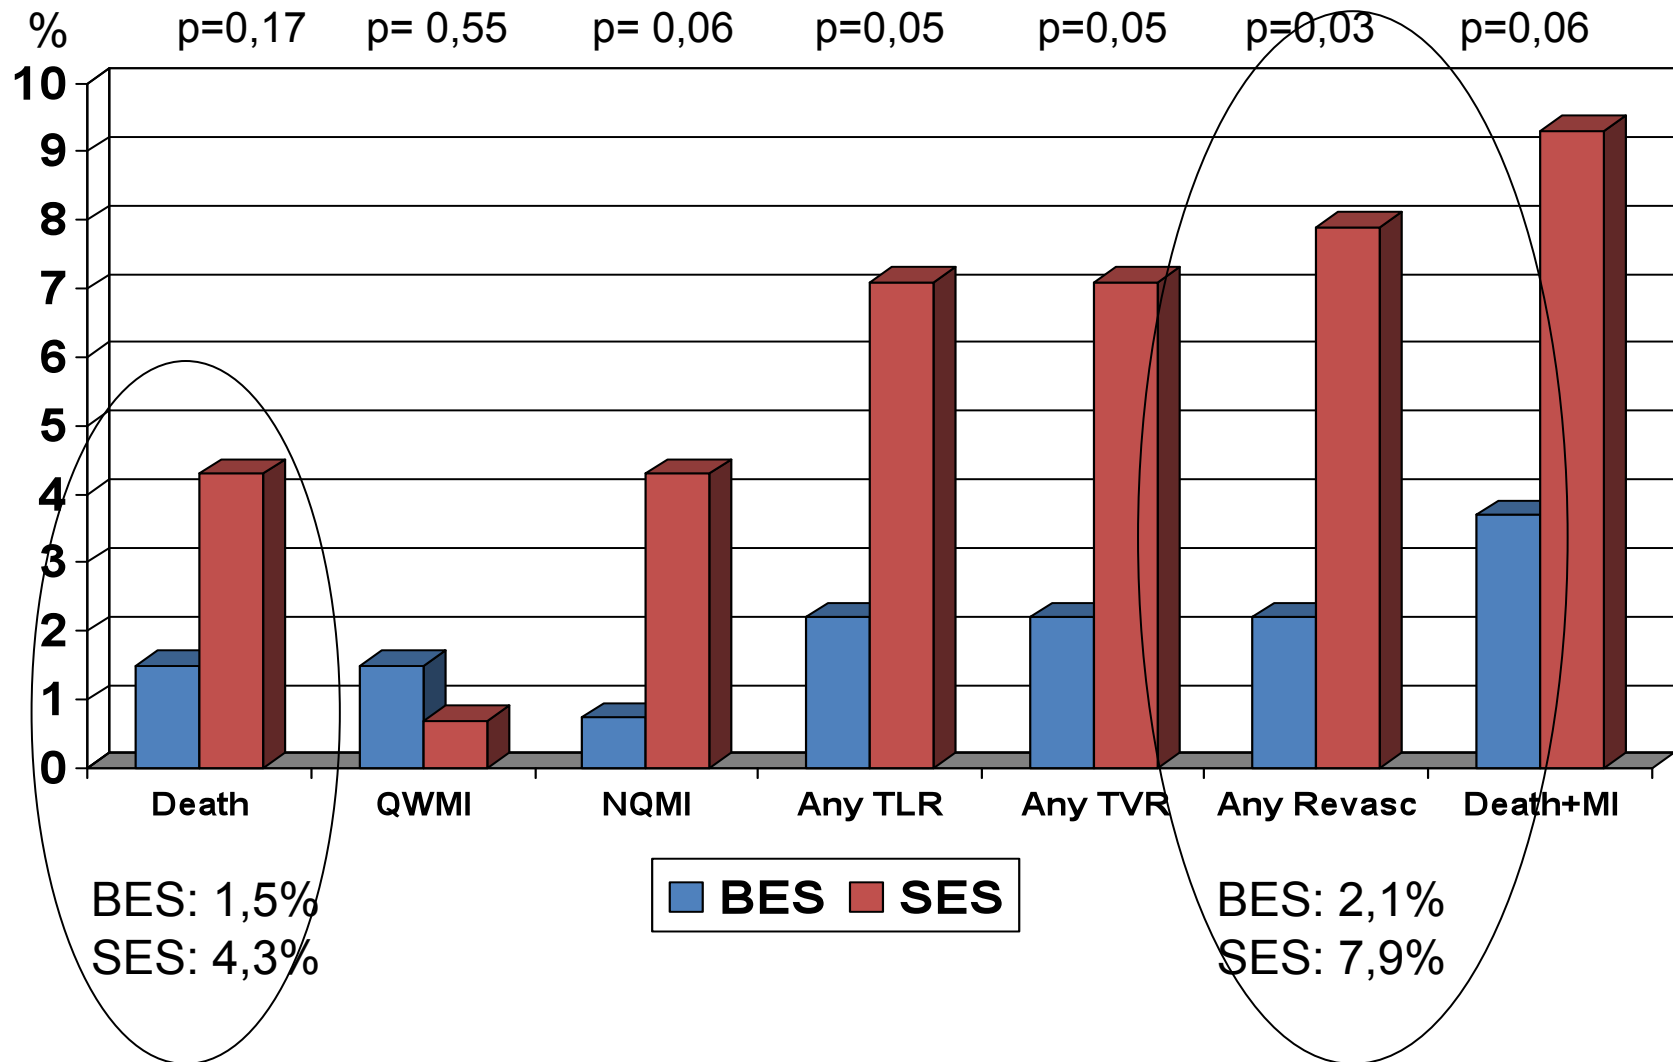

# 30 day MACE for STEMI

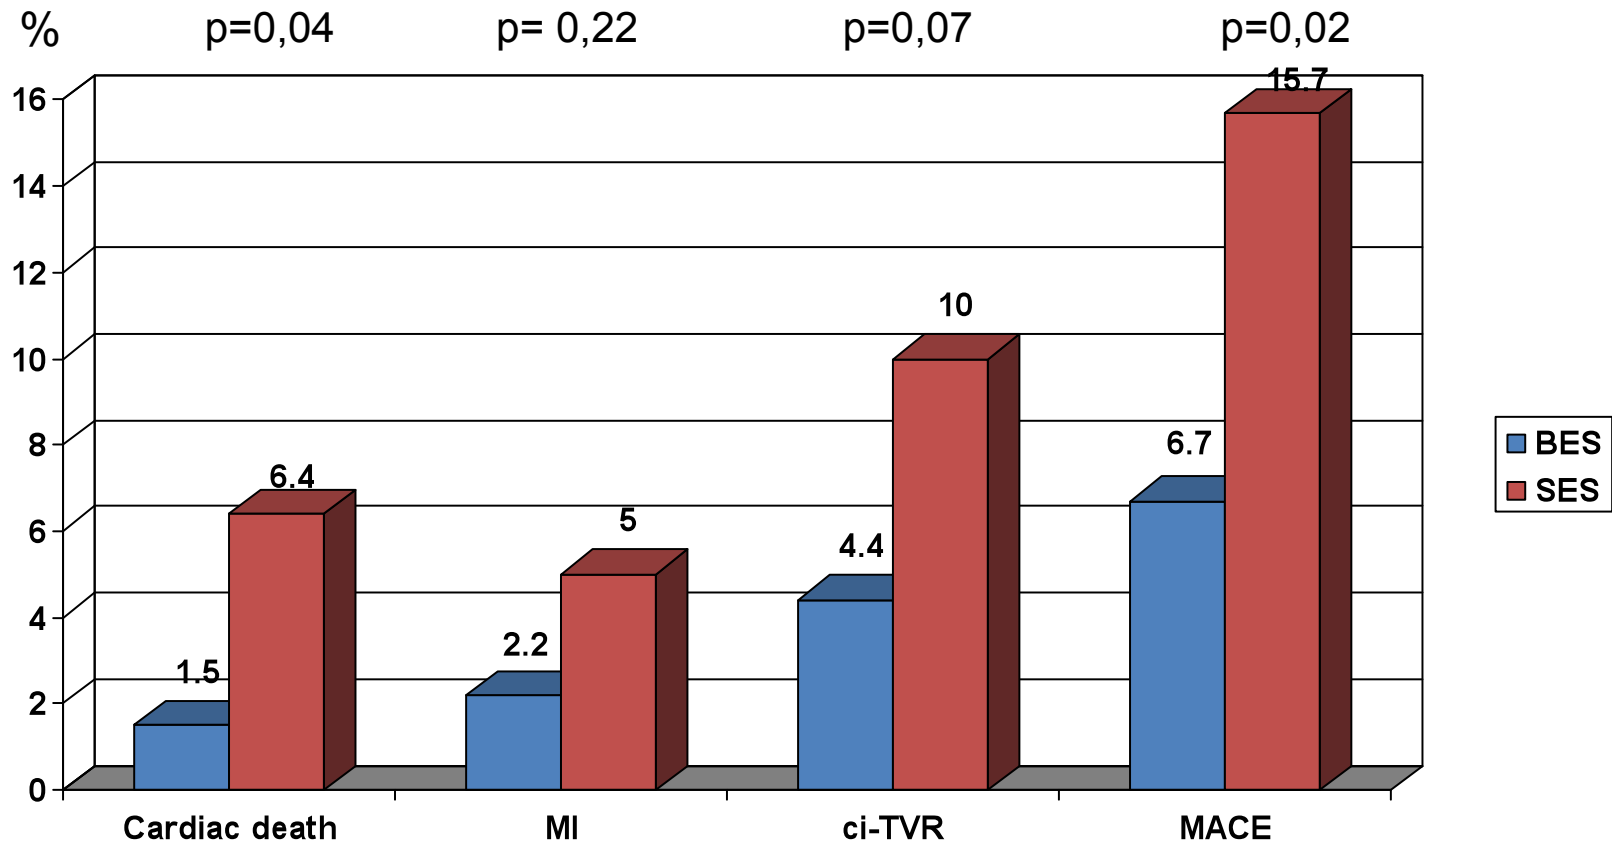

# 30 day events for STEMI

# 30 day events for STEMI

# One-Year Cumulative Incidence of Stent thrombosis: BES vs SES in STEMI

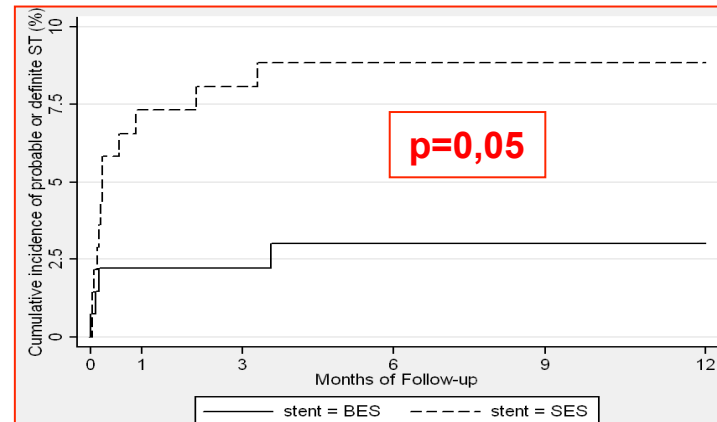

Probable ST

Possible ST

Definite ST

Possible or Definite ST

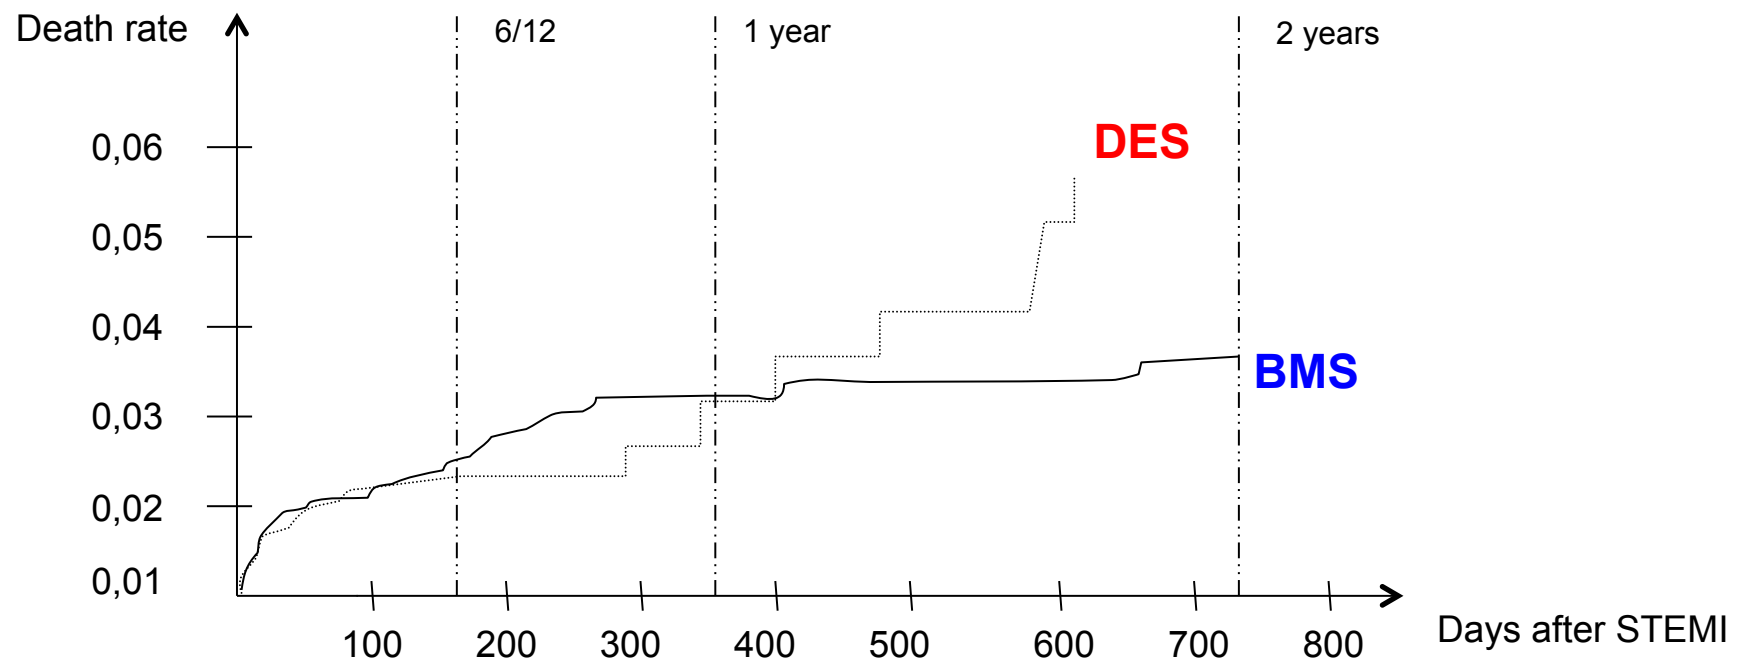

# Why BioMatrix is better than Cypher for STEMI?

- Biodegradable polymer and abluminal coating?
- Mechanical features of the stent platform?
  - Symmetric strut deployment
  - Stent apposition and sealing of the soft plaque and thrombus

# GRACE-AMI

- Survival up to 2 years: BMS vs DES

# Summary

- There was no differences in clinical outcome between SES and BES in NST-ACS patients.
- In BES patients a significant lower incidence of MACE and cardiac death rate at 12 month was observed in STEMI subgroups.
- The difference between BES and SES patients in STEMI are related mainly to subacute ST and TVR occurring during first 30 days.
- Long term follow-up (2 year and longer) is mandatory to assess safety profile of both stents.

# SES vs BES in STEMI

- The significant difference between SES and BES are related mainly to subacute ST and TVR occurring during first 30 days.

# Timing of occurrence of primary endpoints in all patients

## Primary Endpoint Cardiac Death, MI, or TVR @ 9 months

No. at risk	0	1	2	3	4	5	6	7	8	9
